### DETAILED ACTION

1. Applicant's election without traverse of group I and the species of figure 3 in the reply filed on 7-26-04 is acknowledged. All pending claims currently read on the elected invention.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 9-10, and 13-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Ekman et al.

Ekman teaches a vehicle stretcher support including a leg receiving member 12+, a base 11+ (e.g. figure 6 embodiment), and vibration reduction device/springs 14+.

Re claim 1, the base is deemed configured to be mounted as broadly claimed – note the floor is not a positively recited element of the instant claimed invention.

Re claim 9, the base is configured as broadly claimed,

Re claim 10, the springs are deemed mounted as broadly claimed.

Re claims 13-14, see the bosses 20+ in the figure 5 embodiment.

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and

Art Unit: 3612

the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 3, 8, and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ekman et al.

Re claims 3 and 8, Ekman et al teaches all of the claimed features as discussed above regarding claim 1 but fails to teach 3 springs 14 (note the reference discloses two springs 14).

It is notoriously well known in the art to add multiple dampening devices to a cushioning structure until a desired dampening effect is achieved.

In order to provide additional dampening to allow use over rougher terrain, it would have been obvious to one of ordinary skill in the art to provide the Ekman et al system with an additional dampening spring in view of known art practices.

Re claim 11, Ekman et al fails to teach the recited travel limit. The travel limit of the vibration reduction device would be driven by design considerations specific to a given application – e.g. the internal height of a transporting ambulance etc.

Art Unit: 3612

Specific recitation of vibration reduction device travel in this case then would not define a patentably distinct departure from the teachings of Ekman et al.

7. Claims 2, 4-7, and 12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Note at least Reazer III et al additionally teaches a stretcher securing device.
